

Envision Workplace

Now is the Time to Implement the Best Available Technology for Preventing Microbial Growth in Your Workplace

- **Frontpage News: Employee health and safety:** Bringing employees back to the workplace requires a comprehensive plan to address employee health and safety concerns. An integral part of this strategy should be adding a long-term, microbial prevention treatment.
- **Microbes are getting fiercer:** Microbes' ability to adapt, mutate and reemerge is a fact of life. Reduce the threat now by treating your facility with *Anew Facility Armor*.
- **Future Mandates: State, Federal, and CDC mandates may be right around the corner:** As we move forward into a "new normal" work environment, government agencies could be looking to employers to provide proactive microbial prevention as part of an employee protection package.
- **EPA Accepted Technology: Shown to reduce microbial levels to near zero.** Hand washing, disinfectants, standard office cleaning, and UV lights alone cannot do it all. However, combining CDC recommended practices with our microbial shield technology can. This durable, long-lasting treatment bonds permanently, adheres to all visible and hidden interior surfaces and works at the molecular level to destroy microorganisms on contact. Thus, reducing human and material exposure to the lowest levels attainable by any commercial technology.
- **Science: The science behind our disinfectant and microbial prevention system has been tested and proven globally.** We have over thirty years of scientific data from hospitals and other facilities showing a dramatic reduction in infections, odors, molds, and viruses.
- **Process: Professional fogging application is quick and causes minimal disruption.** A full treatment of a given area within your facility can be completed within a single day, with minimal disruption to staff. Skilled and experienced technicians are available to start treating your priority areas right away.
- **Tailored Plan: We can help you develop a treatment plan tailored to your needs.** Whatever your needs, we can work with you to determine the most comprehensive yet cost-effective way to add microbial protection to your arsenal of weapons against destructive microbes.
- **Investment: A modest investment will protect your most important asset – your employees.** When compared to the costs of building, staffing, and maintaining safer and healthier facilities, the additional protection you gain through our microbial prevention shield is outstanding.
- **Cost: We can treat your facilities for less than you think.** Our overall fogging treatment requires minimal investment and covers your entire workplace - floors, walls, existing workstations, seating, private offices, café areas, keyboards, monitors and so much more.
- **Peace of mind matters.** Your staff and their families have plenty to think about during this transition, but worrying about the microbial transfer in their office environment should not be one of them. Our planned approach and qualified implementation team can help guide you through this process.
